## PHPMyAdmin - Can't Login As root User

### PHPMyAdmin and Root Login

If you're trying to login via PHPMyAdmin as the **root** user, it will NOT allow you to login from a remote IP address. This is the way it was designed though! In an effort to improve security, EHCP Force Edition by default does NOT allow remote logins for the root user via PHPMyAdmin. However, you can login using PHPMyAdmin from the local server.

For instructions on how to disable or modify this configuration, please refer to this forum thread:
