General Information

I see a bunch of packages that are supported by the EZ Install Scripts, but how come they don't work?

Previous versions of EHCP Force and EHCP contained several packages that were supposedly supported by the easy install script functionality. Unfortunately, this feature never worked properly, until now. The easy install script functionality has been fixed in the latest version of EHCP Force Edition.

A few major scripts are currently supported by the enhanced functionality found in the latest version of EHCP Force. The packages that are currently supported included:

Joomla, WordPress, Drupal, SMF, phpBB, myBB, phpCOIN.

The update / upgrade EHCP Force script will update the database with the newly supported easy install script definitions. However, if for some reason it doesn't, please run this operation from the server logged in as the admin user:

http://{SERVERIP}/ehcp/index.php?op=updateinstallscriptsql

This will update your supported easy install scripts to match those provided by the EHCP Force Master Server.
